

Fake News Detector User Manual and Setup Guide

Step 1: Download Files from Github repo

First the user will have to download the files from the github repo linked here

<https://github.com/KevMorales11/Fake-News-Detector-Web-App-Utilizing-ML-Models->

The files that you will need will be in the branch titled 'master'. The files you will need to download are:

The "Data" folder

fake-news-detector.py

OR

You can download the whole project from Github and get all of the files and supporting files.

Step 2: Add files from github to Visual Studio Code

Next, the user must take these files and upload them to Visual Studio Code. This is only way the program can be run so they want to ensure that after downloading and uploading their files, their

VSCode Workspace looks similar to this

Step 3: Set file path for True and False csv files

This step is the most important step as the file path needs to be correct in order for the model to be able to train itself using this data. You want to make sure that you move the data folder into a path that is easily traceable and accessible. For example, you want to edit the code that we have provided, removing the path labeled in the code and changing it to the current path of your data folder here.

```
# 1. Load and Prepare the Data
true_df = pd.read_csv('C:\\Users\\music\\fake-news-detector\\Data\\True.csv')
fake_df = pd.read_csv('C:\\Users\\music\\fake-news-detector\\Data\\Fake.csv')
```

This is an example of what the code should look like with the correct paths clearly stated in the code.

Step 3.5 Modules to install in VSCODE

There are a few imports that only work with certain python modules that must be installed
Here are a all of the module commands that need to ran in your VSCODE terminal

```
pip install numpy
pip install pandas
pip install joblib
pip install PyPDF2
pip install scikit-learn
pip install matplotlib
pip install seaborn
pip install scipy
pip install flask
pip install docx
```

Step 4: Run code and allow model to be trained

Step 5: Open web page and insert article you want to test

Once you have ran the code, this webpage should automatically open. From here you should be able to
